

## Containerized Kitchen NSN 7360-01-473-3408

- a. The CK is a mobile kitchen providing flexible, efficient, rapidly deployable meal preparation capability in the field. It is capable of supporting up to 800 soldiers with three hot meals per day.
- b. The CK consists of a combination of existing military standard and commercial components integrated into an expandable 20' container mounted on a tactical trailer. It is towed by a Medium Tactical Vehicle (MTV) 5 ton cargo truck (M1083) or M923 series 5 ton cargo truck as a substitute.
- c. The CK is a partial replacement for the Mobile Kitchen Trailer (MKT) in units where consolidated field feeding operations are suitable.
- d. Major improvements over the MKT include onboard power generation, ventilation of exhaust by-products, environmental control, onboard refrigerated storage, and hot and cold running water.
- e. The CK reduces the transportation footprint by 34%. Each CK replaces two MKTs, one prime mover and one Food Sanitation Center. The CK also reduces manpower by 14% by eliminating one cook for every two MKTs replaced.
